

TMC

Tailored Solutions.
Proven Results.

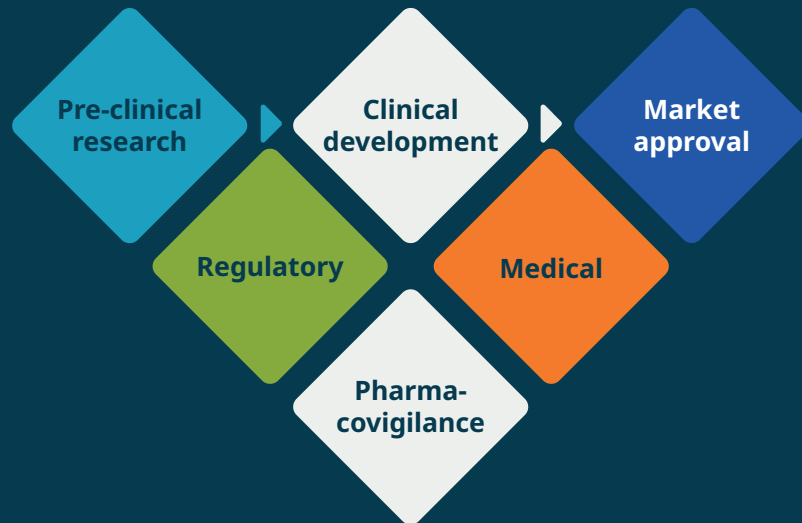

We're **more** than
just a CRO.

Our services

Our **flexible**, **integrated** and **tailored** services span all the drug development phases, including regulatory affairs, pharmacovigilance, clinical development and combined medical services.

Ultimately, our aim is to leverage our experience and work with you to bring potentially life-saving treatments to patients as quickly as possible.

Drug development phases

Regulatory affairs support

We support your journey through global regulatory pathways — navigating efficiently from initial drug discovery through development, so you can avoid unnecessary delays and gain quicker approvals for clinical trials and marketing authorisations.

Pharmacovigilance services

We provide proactive pharmacovigilance solutions for the routine and ad hoc monitoring of the safety of your product, whilst ensuring your regulatory compliance — from the first moment it's given to a patient and throughout its life cycle.

Clinical development support

We support clinical study development and delivery — across all trial phases globally — for rare conditions and diseases. We provide expert scientific and operational guidance throughout the drug development phases to help you successfully deliver your clinical projects.

Combined medical services

We bridge the gap between clinical development, regulatory compliance and market access by offering specialised medical services and ensuring your product not only meets safety and efficacy standards but is also optimised for commercial success.

TMC is a global clinical research organisation dedicated to supporting the progression of life-saving drug development solutions for rare conditions and diseases that are often neglected.

Smaller patient populations create significant challenges in the design and execution of clinical studies for new therapeutics.

We understand these innate challenges — working with small-to-medium biotech and biopharmaceutical companies to bring treatments for rare diseases to the market.

Rare diseases affect less than 65 per 100,000 people. Yet, cumulatively, rare disorders and diseases are not so rare at all. There are approximately 300 million people living with a rare disease worldwide*.

The perfect FIT

We're people-driven and patient-focused — with an emphasis on achieving the best possible outcomes for our clients and their patients. Because *every* person matters.

TMC FIT is our promise to our clients and the patients they serve. We achieve this by being:

Flexible in our business model.

Integrated in our personalised approach.

Tailored in our ability to provide innovative and unique solutions.

Our focus areas

Our expert in-house team and global network of trusted associates each bring at least 15 years' worth of experience to every project, particularly in our key rare disease specialisms:

- Oncology
- Respiratory diseases
- Neurological disorders
- Haematology
- Ophthalmological conditions
- Hepatology
- Nephrology diseases
- Neonatology

At the heart of everything we do
are the patients we aim to serve
through clinical research in rare
diseases.
